#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) ☒ Responsive to communication(s) filed on 12 March 2004.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.

## DETAILED ACTION

### *Claim Objections*

1. Claim 6 is objected to because of the following informalities: on line 19, "gain" is missing after "the current." Appropriate correction is required.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-9 are rejected under 35 U.S.C. 102(e) as being anticipated by Webster et al (US 6,748,200).

Claims 1,2,5and 6.

Webster et al discloses an automatic gain control (AGC) method and apparatus for a wireless communication network to use a signal saturation property as a standard for entering an acquisition mode, comprising;

computing the average power of a received signal and monitoring the power range

variation of the received signal (col.13, lines 3-38);

entering a gain acquisition mode when the monitored signal power changes from below a saturation threshold to above the saturation threshold (col.13, lines 47-53);

returning the current gain back to a default gain (col.13, lines 53-55);

Art Unit: 2611

re-computing the signal average power and, if the monitored power still does not fall within the tracking range, tuning the gain accordingly until the signal average power falls within the tracking range (col. 13, lines 60-67); and entering a gain tracking mode for gain tracking (col.14, lines 26-31).

Claims 3,4,7 and 9.

Although not described, it is a primary function of an AGC to decrease the gain when the received signal power is greater than the upper limit of the tracking range to prevent a saturation and vice versa.

Claims 8 and 10.

Webster et al teaches adjusting the gain by a default step. See col. 17, lines 11-17.
